

STEP 1

Simply pour our Concrete Etching Fluid onto the floor and apply by brush. A floor scrubbing brush will help for larger areas. Simply brush on and rinse away.

Our Concrete Etching Fluid:

- Ensures good adhesion.
- Gives a 'key' to smooth concrete.
- Helps provide a slip/ skid resistant surface on polished concrete.

STEP 2

Once you have applied the Concrete Etching Fluid to your floor, carefully rinse the floor clean, make sure you don't use anything powerful like a pressure washer as this may ruin all your hard work!

STEP 3

You can now leave the floor to dry out! (Approx. 48 hours)

When the floor is dry, it's ready to paint!

STEP 4

Usually just one coat of our Epoxy Gloss Coat will do the job, but to ensure a perfectly even finish you should coat the floor twice. Our Epoxy Gloss Coat comes in a wide range of colours to suit you!

STEP 5

Once dried, your concrete floor is now ready to use.
